

SDCF Step-up/down quantifier settings

Step type

Steps-up

Number of steps-up in frequency of adjecant categories in histogram

Operation mode

Difference of interest-measures

Test applied to the difference of quantifier values computed separately from each frequency table

Category Range

From 0 To 100

Reset to All

- Absolute category index
- Relative range [%] to act number of categories

Primary IM Settings

Set as primary IM From 0 To 1  
 Normalize value range: 0 1

Note

-

OK Cancel

Relation

Greater than or equal

Step count threshold value

80  Consecutive steps (the longest sequence)

Step-count units

Absolute number

Absolute number of steps. Count value is left as given.

Step Properties

Minimal step size (frequency difference)

1

Minimal-step-size units

Absolute number

Change in frequency as an absolute number. Minimal step size is left as given.
