

Vysvětlit všechno, asi to dát do typových úloh a tam udělat strukturu

Automatic filtering of results based on Domain knowledge

Check all the hypotheses from current list against

- the whole set of defined domain knowledge
- domain knowledge from the author: PowerUser
- a user-defined set of domain knowledge

Include only the very last opinion for each pair of attributes

and hypotheses that

- are not consequences of any of the above selected domain knowledge
- are consequences of some of the above selected domain knowledge

Deduction type: Strictly logical deduction

copy into

- new group of hypotheses: BK match group
- already existing group: Muži
